

# COSMETIC DENTISTRY

Fabulous Solutions in  
Cosmetic Dental Artistry

## PORCELAIN VENEERS

Veneers are a wonderful cosmetic solution for darkened, or worn and aged looking front teeth. Ultra-thin pieces of porcelain are color-matched to your natural tooth, then applied with super-strong bonding agent (like glue, but different) to teeth that have been prepared. Teeth are prepared by gently reshaping them so that the veneer does not make your smile look bulky.

## FULL MOUTH RESTORATION

A full-mouth restoration is a course of treatments wherein we combine both restorative and cosmetic care to make your smile its absolute best. We begin with a comprehensive exam, then make individualized recommendations based on your special needs. Some of the treatments that may be part of a full-mouth restoration are implant dentures, crowns, extractions, endodontics (root canals), gum therapy, and many others. If it’s been a while since you’ve seen a dentist, come talk to us.

## CROWN LENGTHENING AND GUM RECONTOURING

The difference between these two procedures is subtle, but really important to the doctor performing them. Both are solutions to the problem of a “gummy” smile—that is, teeth that seem short, or out of proportion with the gum line. In crown lengthening, both soft (gum) and hard (tooth) tissues are altered. In gum recontouring, only the gum tissue is changed. Dr. Majka believes dentistry is art, so no matter which solution is right for you, your smile will be gorgeous.

## COMPOSITE BONDING

Dentists use a composite bonding material that can be color matched to individual tooth shades to fill in gaps, smooth cracks, and fix minor chips in teeth. This solution lasts for years and is painless and beautiful.

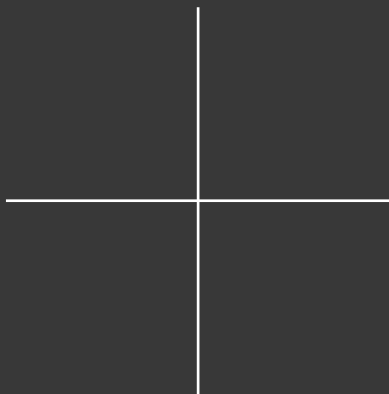

## TOOTH RECONTOURING

When teeth are chipped or uneven around the edges, Dr. Majka can act like a sculptor and remove tiny bits of your tooth tissue in order to create an even, harmonious smile. This procedure is painless and lasts forever.

## SMILE WHITENING

Ask us about professional whitening with our take-home whitening trays from Opalescence. Take-home trays are custom fitted to your particular teeth. You take tubes of professional whitening gel home with you, fill the trays, and wear them for about fifteen minutes each day.
